Experience

Senior Software Engineer **Google Cloud/Mandiant/FireEye -** January 2020 to Present

- Provided infrastructure and engineering support to produce subscription malware emulation content for customers of the Google/Mandiant Security Validation product.
- Facilitated large increases in the rate and volume of content creation for the Google/Mandiant Security Validation product.
- Built and operated cybersecurity research and production labs and tools on VMware, AWS, Azure, and Google Cloud infrastructure.
- Helped cybersecurity researchers in the particulars of cloud infrastructure for research and content production.
- Transitioned Mandiant's Validation Research Team infrastructure through multiple migrations and acquisitions.
- Conducted research and development of tools and techniques relating to cloud security.

Senior Manager, Threat Research and Analytics ***CenturyLink/Lumen*** *April 2018-April 2019*

- Developed new tools for security data analysis using emerging data science techniques.
- Integrated threat intelligence feeds into Managed Security Services Platform.
- Implemented large-scale security log data collection technology for multi-tenant data centers.
- Implemented technologies and methods for cloud monitoring in Azure and AWS.
- Built development labs in AWS, Azure and CenturyLink Cloud.
- Worked with analysts and developers on new cybersecurity use-cases.
- Helped develop SOC analyst playbooks, tools, and automation.
- Worked with teams on developing parsing and correlation technology for security event data.

Manager, Architecture and Analysis ***CenturyLink*** *April 2016-April 2018*

- Developed and presented security solution architectures for corporate and government customers in response to Requests for Proposals.
- Formed and supervised a team of senior cybersecurity architects in support of customer capture around Managed Security Service offerings including security policy and governance, FISMA compliance, vulnerability assessments/pentesting, firewall/IDS management, DDoS mitigation, incident response, cloud monitoring, security log monitoring and SIEM support.
- Managed technology integration partnerships with security vendors including IBM, Cisco, Palo Alto, Imperva, LookingGlass, ThreatConnect, and RiskSense.
- Helped Increase new security practice revenue to over $50 million/year.

Service Delivery Manager ***NetAura*** *LLC August 2015-April 2016*

- Developed and delivered an innovative Managed Security Services Platform leveraging proprietary collection technology and cloud-based analysis and reporting in a FedRamp certified environment.
- Recognized as an innovator by industry analysts such as IDC, Forrester, and Gartner, and increased CenturyLink's rating as a Managed Security Services Provider.
- Held platform demonstration sessions at the APAC region RSA conference in Singapore to accompany APAC product launch.

Senior System Security Engineer ***NetAura*** *LLC/Dept. Of Homeland Security November 2014-August 2015*

- Engineering Lead of the DHS SOC for the Transportation Security Administration (TSA).
- Oversaw the technical operation and on-going development of a large ArcSight-based SIEM.
- Participated in incident response activities
- Delivered regular status and metrics reports to the federal agency CISO.
- Held Top Secret clearance.

Systems Manager ***National School Boards Association*** *October 1990-April 2014*

- Built and operated various enterprise IT systems including VAX VMS, Unix, Microsoft enterprise networking and applications, inter-networking systems, firewalls, switches, and routers for a 90,000-member education non-profit association.

Other Experience

- VMware, AWS, Azure, Google Cloud
- Linux, Windows, Bash, PowerShell, Python, Notebooks
- Intrusion detection and mitigation
- SIEM
- Firewall, router and switch configuration and management
- Packet analysis
- DNS and IP addressing
- Network resource auditing and reporting
- Network analysis, troubleshooting and tuning
- VPN and remote access
- Technical project management and communication
- Network/Internet topology and routing
- Server and workstation performance analysis, troubleshooting and tuning
- Enterprise application hosting and performance
- Physical data center management
